

Netop Guest Citrix XenApp integration (EN)

Article Number: 465 | Last Updated: Tue, Oct 24, 2017 11:55 AM

XenApp is application virtualization software that delivers centrally-hosted Windows applications to local devices without the necessity of installing them. It is the flagship product for **Citrix** and was formerly known under the names WinFrame, MetaFrame and Presentation Server. **Benefits of the Citrix XenApp integration:**

- Mobility.** Users can get the feature set of the Windows based Guest from Windows, Mac, Linux, iOS, Android and other operating systems.
- Easier application management.** By serving to the user the application from the same place, you can always make sure that the application has the latest feature and security updates.
- Lower cost.** Reduced costs for remote application deployment.

This article describes how to make the Netop Guest run as an app on Citrix XenApp. You can learn the instructions by reading the document attached below. The video shows how you can use the Netop Guest on iOS using
