1 Netop Pack'n Deploy

Netop Pack'n Deploy enables you to create a customized **Netop Remote Control** or **Netop School** module setup (<u>Pack</u>) and install the module in this customized setup on multiple remote computers (<u>Deploy</u>) or silently on a local computer (<u>Silent</u>).

It is a complementary Netop product that is available for free to **Netop Remote Control** and **Netop School** users.

This section includes these sections:

- Install
- <u>Load</u>
- <u>Pack</u>
- Deploy
- Silent Install

1.1 Install

You can download the Netop Pack'n Deploy installation file Packndeploy.msi from the Netop KnowledgeBase, select Download Products > Netop Pack'n Deploy. We recommend that you save PacknDeploy.msi on your computer desktop to install from it.

To install Netop Pack'n Deploy, run (double-click) PacknDeploy.msi. The Netop Pack'n Deploy wixzard will be displayed:

👹 Netop Pack'n Deploy	_ 🗆 🛛
Welcome to the Netop Pack'n Deploy Setup Wizard	Netop
The installer will guide you through the steps required to install Netop Pack'n Deploy computer.	on your

	Cancel < B	ack Next >

Click Next to start installation.

Click **Close** to close the window.

1.2 Load

Assuming that you <u>installed</u> Netop Pack'n Deploy in the suggested destination directory, click Start > All Programs > Netop Remote Control > Pack'n Deploy :

🍓 Neto	op Pack'n Deploy 📃 🗖 🔀
	elp
·····	🍓 MSI 📓 Properties 💐 Features 👻 Configuration 🙋 Shortcut 📢 Advanced 👍 Build
	Original MSI File Open Open
	Output Folder
	Open
	Build Back Next Exit

Alternatively, in the selected destination directory, run (double-click) packndeploy.exe.

It contains below a Menu Bar a left selection bar and a right work panel.

The selection bar contains these buttons:

Pack: Click to show <u>Pack</u> elements in the right work panel to enable creating a customized Netop module setup.

Deploy: Click to show <u>Deploy</u> elements in the right work panel to enable deploying a customized setup Netop module. 1.2.1 Menu Bar

This is the Netop Pack'n Deploy menu bar:

File Help

It contains these menus:

File He	lelp
Exit	Alt+F4

Exit Alt+F4: Select or press ALT+F4 to close the window and unload <u>Netop Pack'n Deploy</u>.

File	Help									
	Help About	F1								

Help F1: Select or press F1 to open the Netop Pack'n Deploy Help system.

About: Select this command to see <u>Netop Pack'n Deploy</u> version and build number that you will be asked for if you request <u>Netop support</u>.

1.3 Pack

Click the <u>Netop Pack'n Deploy</u> window left selection bar **Pack** button to show these window contents:

🍓 Neto	p Pack'n Deploy 📃 🗖 🔀
	elp
	🗞 MSI 📝 Properties 💐 Features 👻 Configuration 🙋 Shortcut 📢 Advanced 🍰 Build Original MSI File
	Output Folder Open Open
	Build Back Next Exit

The right work panel will contain these customized Netop module setup tabs:

- <u>MSI</u>
- Properties
- Features
- <u>Configuration</u>
- <u>Shortcut</u>
- <u>Advanced</u>

• Build

and these buttons:

Build: Will become enabled when a customized module setup has been specified on the tabs. Click it to create customized setup installation files.

Back: Click to show the tab to the left of the shown tab.

Next: Click to show the tab to the right of the shown tab.

Exit: Click to close the window to unload <u>Netop Pack'n Deploy</u>. 1.3.1 MSI Tab

This is the Netop Pack'n Deploy window Pack selection work panel MSI tab:

🍓 MSI 🗵 Properties 🛃 Features 🗐 👻 Configuration 🛛 🙋 Shortcut 🛛 📢	Advanced 💧 約	Build
Ciriginal MSI File		
	Open	
Coutput Folder		
	Open	

To create a customized Netop module setup, it must specify the Netop module msi file and the directory in which customized setup installation files shall be saved.

Original MSI file [] [Open]: Click **Open** to show an **Open MSI File** window to open a Netop module msi file to show its path in the field. You can also drag from Windows Explorer and drop in the field.

Output folder [] [Open]: Click **Open** to show a **Browse for Folder** window to select the folder in which customized setup installation files shall be saved, e.g. a **Pack Output** folder on the desktop, to show its path in the field. You can also drag from Windows Explorer or the desktop and drop in the field.

Note: Until you have specified a valid Pack work panel tab.

pre.cmd/post.cmd

You can specify command files to be executed before and after the installation file.

1. setup.exe (the actual installation process) is called.

2. OutDir as the output folder.

or

If you are running Pack'n Deploy from a command line, specify -i OutDir as a parameter for Pack'n Deploy.

All files in this folder will be copied to the machine you deploy to.

When the installation is complete, all files in the **AltFiles** directory will be cleaned up on the machine you have deployed to.

If you want to keep any of these files on the machine you deploy to after installation, you should add them to the .mst file.

1.3.2 Properties Tab

This is the Netop Pack'n Deploy window Pack selection work panel Properties tab:

Property 🔶	Value	Description	Edit
ALLUSERS	1	1 will enable all computer users to run the application.	Eald
ARPHELPLINK	http://www.netop.com	Specifies the Internet address for technical support (in Add/Remove Programs)	Add
ARPPRODUCTICON	icohostmain.exe	Must specify the application foreign key to the icon table.	MOO
DW_ALLOW_XP_FIREWALL	1	1 will enable Net op communication through Windows Firewall.	
DW_LAUNCH_NETOP	1	1 will load the Netop module after installation.	
DW_LICENSE_RHST_NEW_SN		Do not edit / internal use only.	
DW_LICENSE_RHST_ORG_SN		Specify the Netop Remote Control Host license number to upgrade from.	
DW_LICENSE_RHST_SN		Specify the Netop Remote Control Host license number.	
DW_NRC_DIR		Do not edit	
DW_REMOVE_SETTINGS		1 will remove Netop configuration files when reinstalling.	
DW_RESTART_SERVICE	1	1 will restart the Netop Host service after installation.	
DW_RHST_DIR		Optionally, non-default Net op Host directory path.	
DW_SAVE_MSI		1 will save msi file for modify and repair	
DW_TEMP_DIR		Temporary path	
DW_UPGRADE_NEWER_PRODUCTS		Do not edit / internal use only.	
DW_UPGRADE_OLDER_PRODUCTS		Do not edit / internal use only.	
DW_UPGRADE_UNINSTALL_INFO		Do not edit / internal use only.	
DW_ZNSX_DIR			
INSTALLLEVEL	100	100 is the Typical installation level. Don't set this value, it is used by this program.	
PRIMARYFOLDER	TARGETDIR	Do not edit / internal use only.	

It specifies the public properties of customized setup installation files in property table records with these column contents:

- Property: Property name.
- Value: Property value.
- **Description**: Optionally, a property description.

The table can show public Windows Installer properties whose names do not start with DW_{-} and public Netop properties whose names start with DW_{-} . Private properties that you cannot edit will not be shown. Value options are explained in the table below. Default values are marked with an asterisk.

Property	Value Options
ALLUSERS	• <none>: No value will remove the ALLUSERS property from the table. Only the installing user can run the application.</none>
	• 1*: A user with administrator privileges can install the application. All computer users can run the application.
	• 2: If installed by a user without administrator privileges, only the installing user can run the application. If installed by a user with administrator privileges, all computer users can run the application.
ARPHELPLINK	Internet address for technical support. http://support.netop.com * is the Support for Netop Remote Control Internet address.
ARPPRODUCTICON	Must specify the foreign key to the Windows Installer icon table, which is the primary icon for the Windows Installer package.
	• <pre>icohostmain.exe* is the Netop Host and extended Host foreign key.</pre>
	• icoguest32.exe is the Netop Guest foreign key.

	• icostudents.exe is the Netop Student foreign key.
	• icoteacher.exe is the Netop Teacher foreign key.
DW_ALLOW_XP_FIREWALL	• <none>: Will disable Netop communication through the computer Windows Firewall.</none>
	• 1*: Will enable Netop communication through the computer Windows Firewall.
DW_LAUNCH_NETOP	• <none>: Will not load the Netop module after installation.</none>
	• 1*: Will load the Netop module after installation.
DW_LICENSE_RHST_NEW_SN	Do not edit this property. If you are upgrading installations, it will specify the new Netop module license number generated from the original license number specified below.
DW_LICENSE_RHST_ORG_SN	If you are upgrading installations, specify the original Netop module license number from which a new license number shall be generated.
DW_LICENSE_RHST_SN	Specify the Netop module license number (none*).
DW_NRC_DIR	Do not edit this property that is for internal use only.
DW_REMOVE_SETTINGS	• <none>: Will not remove installed Netop configuration files when reinstalling.</none>
	• 1*: Will remove installed Netop configuration files when reinstalling.
DW_RESTART_SERVICE	 <none>: Will not restart the Netop Host service after installation.</none>
	• 1*: Will restart the Netop Host service after installation to enable any installed or updated Netop Host.
DW_RHST_DIR	You can specify an alternative installed module directory path.
DW_SAVE_MSI	• <none>: Will not save the installed module ${\tt msi}$ file.</none>
	• 1*: Will save the installed module ${\tt msi}$ file to make it available for modify and repair.
DW_TEMP_DIR	You can specify an alternative temporary directory path.
DW_UPGRADE_NEWER_PRODUCTS	Do not edit this property that is for internal use only.
DW_UPGRADE_OLDER_PRODUCTS	Do not edit this property that is for internal use only.
DW_UPGRADE_UNINSTALL_INFO	Do not edit this property that is for internal use only.
INSTALLLEVEL	Installable features can be assigned a level from 0 to 32767. A number in the range 1 to 32767 will make features with a lower number except 0 available for installation. $100*$ is the normal level for a Typical installation.
PRIMARYFOLDER	Must be the key name of a directory that exists in the Windows

Installer directory table. ${\tt TARGETDIR}^{\star}$ will typically specify the directory recommended by the manufacturer.

Note: The letter combination RHST stands for Netop Remote Control Host. Other letter combinations will appear for other Netop modules.

Edit: Select a record and click to show this window:

Ok Cancel

- Title []: You can edit the feature title.
- **Description** []: You can edit the feature description.

1.3.4 Configuration Tab

This is the **Netop Pack'n Deploy** window <u>Pack</u> selection work panel **Configuration** tab:

🍓 MSI 🛛 🖉 Properties 🛃 Features 🙎 Configuration 🖉 Shortcut 🕅 🕼 Adv.	anced 🔒 Build
Configuration Program	
C:\Program Files\Netop\Netop Remote Control\Host\NHSTW32.EXE	Run
Configuration Files	
Path:	
C:\Documents and Settings\All Users\Application Data\Netop\Netop Remote Control\Host\	Browse
File Name 🔷 Install Path	
comiplst.ndb	
comprof.ndb	
modems.ndb	
nhstconf.ndb	
secur_ds.ndb	
secur_nt.ndb	
security.ndb	

It enables replacing selected original MSI file configuration files by the user configuration files of a selected matching Netop module to set up installed modules like the selected module.

Configuration program [] [Run]: To replace configuration files, this field must show the program file path of the Netop module whose setup you want to copy. Click **Run** to run the application to set it up like you want installed modules to be set up.

Note: Netop module setup will be written to user configuration files at unload. Remember to unload the configuration program to write its setup to its user configuration files.

Configuration files [] [Browse] []: This field will initially show the **Configuration program** default user configuration files directory path. If the **Configuration Program** user configuration files do not reside in their default directory path, click **Browse** to show the **Browse for Folder** window to select the actual **Configuration Program** user configuration files directory to show its path in the field.

The table below will contain check boxed configuration file records with these column contents:

- File name: Check/uncheck the box to replace/not replace the file.
- Install path: If the File name column box is checked, the replacement configuration file path will be shown.

1.3.5 Shortcut Tab

This is the Netop Pack'n Deploy window Pack selection work panel Shortcut tab:

It enables you to edit the installed Netop module program folder shortcuts.

Initially, it will show records of Original MSI file shortcuts in a table with these column contents:

- Name: Checkbox (default checked) and shortcut name. Uncheck/check the box to not create/ create the program folder shortcut.
- Feature: Name of the Feature that will be loaded by the shortcut.

Edit: Select a record and click this button to show this window:

🍓 Edit Shortcut	? 🛛

It enables you to replace selected Original MSI file installed files by specified files.

Its table will contain check boxed records of installed files other than <u>Feature tab</u> program files and <u>Configuration tab</u> configuration files with these column contents:

- File name: Check/uncheck the box to replace/not replace the file by the Source Path column file.
- Source path: Must show a replacement file source path if the File name column box is checked, see Browse.
- Browse: Select a record and click this button to show a New Source Path for <File name> window to open a replacement file to show its path in the Source Path column cell.

1.3.6.2 Advanced Add Files Tab

This is the **Netop Pack'n Deploy** window <u>Pack</u> selection work panel <u>Advanced</u> tab **Add Files** subtab:

🍓 MSI 📓 Properties 🔩 Features 🔮 Configuration 🙋 Shortcut	🕼 Advanced	👍 Build
Select Destination Folder		
Source Files	Brow	se
	Brow	se
Add		
Files Source File		
	Edit	
📢 Files 🔒 Add Files 🞯 INI Settings 🔡 Registry		

It enables you to add specified files to a customized Netop module setup in these elements:

Select

Destination folder [] [Browse]: Leave empty to copy specified <u>Source Path</u> to the folder in which the <u>Original MSI file</u> program files will be installed. Click **Browse** to show the **Browse for Folder** window to select a local computer folder to show its path in the field. You can also drag from Windows Explorer and drop in the field. You can edit the destination folder path.

Source files [] [Browse]: Click **Browse** to show a **Source Files** window to open local computer files to show their paths in the field. You can also drag from Windows Explorer and drop in the field. You can edit the field contents to change the file paths.

Add: Click this button to add the <u>Destination folder</u> and <u>Source Files</u> field specifications the to the **Files** section table to empty the <u>Source Files</u> field.

Files

The table will contain add file records with these column contents:

- Source file: Will contain a check boxed source file path. Check/uncheck the box to add/not add the source file.
- Destination file: Will show the destination file path.

Select a record and click Edit to show this window:

Fi ? 🔀
olHost_UK.msi
Cancel

• **Destination file path:** []: You can edit the path to change the destination folder and file name.

Note: If a drive with the **Destination file path** drive designation does not exist on the destination computer, the file will not be added. If other elements of the **Destination file path** do not exist on the destination computer, they will be created. An added file will overwrite an existing file in the same destination computer path.

1.3.6.3 Advanced INI Settings Tab

This is the **Netop Pack'n Deploy** window <u>Pack</u> selection work panel <u>Advanced</u> tab **INI Settings** sub-tab:

File Name	Dir. Property	Section 🔷	Key	Value	- In

	Deploy

The right work panel will contain these elements:

• Source folder path [][Browse]: Click Browse to show a Browse for Folder window to select the deployment source folder to show its path in the field. To deploy a Netop Pack'n Deploy Pack customized setup Netop module, select its output folder. Otherwise, select a folder that contains the Netop module msi file. The first found msi file in the folder will be used. Therefore, we recommend that you verify that the folder contains only one msi file.

Deploy to

- Select ⊙ All or Selected to show all or only selected computer names in the pane. The two remaining options (Success and Failed) will be available after deployment.
- Computer list [] [Save] [Browse]: To save a computer selection, click [Save] to save the selection in a text file. To apply a saved computer selection, click [Browse] to select a text file to show its path in the field and mark available computer names in the pane that belong to the selection with an icon.

Credentials

- **User name**: Installing Netop modules on remote computers will require administrator rights. Specify the name by which the user that installs on remote computers shall be identified.
- **Password**: Specify the password by which the user that installs on remote computers shall be identified.

Optional

- License key []: You can specify the license key by which the Netop module shall be installed here or on the <u>Properties tab</u>.
- Log path []: Deployment to each remote computer will create a local log file named <Remote computer name>.log and if successfully connected to the remote computer a remote log file named <Remote computer name>.rlg. These plain text log files will tell what went wrong in a failed deployment. You can specify the directory in which these log files shall be saved. .\log means a log directory under the Netop Pack'n Deploy directory.
- **Restart** []: Select one of the options **Never**, **If needed** or **Always** to make the remote computer do that after installation.
- **MSI parameters []:** To apply selected Windows Installer parameters to installations on remote computers, specify them in this field. To view available Windows Installer parameters, from a command prompt specify msiexec.

Deploy

To execute deployment, click **Deploy**.

Progress will be indicated by these icons replacing pane \checkmark icons:

- 🚯: Deployment in progress.
- 🙂: Deployment ended successfully.
- 🔀: Deployment failed. Read logs to identify what went wrong.

1.5 Silent Install

To run Silent Install (Windows Installer) from a directory that contains **Netop Pack'n Deploy** output files, from a command prompt or in the Run window execute this command:

<Directory path>:\msiexec /i <Application.msi> TRANSFORMS=<Application.mst>

Note: Application represents the original msi file name.

This command will install and set up the Netop module as specified in **Netop Pack'n Deploy** showing normal installation windows.

You can add these optional parameters to the command in any order:

Parameter	Function
/quiet	Quiet mode, no user interaction.
/l* <log file="" name=""></log>	Creates an installation log in <log file="" name="">.</log>

Note: To show the full range of msiexec parameters, from a command prompt execute the command msiexec.

Example:

<Directory path>:\msiexec /i NetopRemoteControlHost_UK.msi /quiet /l* setup.log TRANSFORMS=NetopRemoteControlHost_UK.mst

This command will install and set up Netop Remote Control Host from Netop Pack'n Deploy output files in quiet mode logging the installation in a setup.log file.
