

Netop Remote Control Windows Azure Multi Factor Authentication

Article Number: 362 | Last Updated: Tue, Jan 20, 2015 8:01 AM

Netop Remote Control version 11.6 introduces extended security with Windows Azure multi-factor authentication. The host is validated based on two factors: one authentication factor is the Host credentials (something the user knows), the second factor is a passcode received by phone (something the user has).

This document explains how to retrieve the Microsoft Azure information, how to configure and connect to the host.
