

Netop Remote Control: 4690 Technical Specifications

Article Number: 421 | Last Updated: Mon, Jan 30, 2017 1:48 PM

Using Netop within a 4690 Controller environment requires the following software components: The Netop Host which is installed on the 4690 Controller and is required as part of the 4690 extension creation and deployment process as instructed by Toshiba. The Netop Guest which is installed on the machine used by the person requiring remote control to the 4690 Controller, i.e. Support Representative or Store Manager. The Netop Security Server which provides centralized access control for your Netop Remote Control environment. Netop Remote Control is available for Toshiba 4690 Controllers running version 6.4 or later. **4690 System Support** Controllers running V6R4 and later.
