Netop Remote Control: How to define and use key bindings

Article Number: 435 | Last Updated: Tue, Jan 31, 2017 1:20 PM

Starting with Netop Remote Control 12.22, Netop Guests running on Linux can execute local apps by using key bindings. Although key bindings are defined locally on the computer where the Netop Guest resides, they are sent to the Netop Host. If you want to use key bindings, once you have successfully installed the Netop Guest, you need to define them. **Define Key Bindings** On the computer where the Netop Guest resides, go to /home/\$USER/.netopguest/ and create the keybindings.conf file. In the keybindings.conf file define the key bindings by adding lines that have the following syntax: SHORTCUT: app Where: SHORTCUT is a key combination. Please note that the shortcut is valid in upper case only. App is a string as given in the terminal. SHORTCUT and command are separated by colon ":" **Note:** The configuration file accepts empty lines or comments (lines that start with "#") A valid SHORTCUT is a key combination that follows these rules: The key combination is not empty. Every key in the combination is valid: **CTRL/ALT/SHIFT/SUPER/A-Z/-9/F1-F12**.

Exception: The Linux OS captures CTRL+ALT+F1-F12; therefore, the Netop Guest will not receive these key combinations. The first key is a modifier (CTRL/ALT/SHIFT/SUPER). The last key is a non-modifier (A-Z/0-9/F1-F12). The key combination has only 1 non-modifier. The SHORTCUT contains at least one modifier and ends in the non-modifier. Caution: Using key bindings that come by default with the operating system can have undesired effects on the Host. For example, instead of using CTRL+A: firefox, consider using ALT+F2: firefox. Examples of valid key bindings ALT+F2: firefox --new-tab www.netop.com CTRL+ALT+F5: gedit SHIFT+CTRL+L: Is -I Examples of invalid valid key bindings CTRL+SPACE - SPACE is not a valid key. A+SHIFT – the first key is not a modifiers. CTRL+ALT – the last key is not a non-modifier. CTRL+A+B - there is more than 1 non-modifier in the shortcut.
