How to count the number of Hosts running in your network

Article Number: 439 | Last Updated: Thu, Jun 2, 2016 11:04 AM

The Netop Scan utility is used to discover running Netop Hosts on LAN. It consists of the script hostscan.cmd which calls netopbrw.exe. Run hostscan.cmd to get a list of Netop modules e.g. Host, Gateway, Guest. The modules must have TCP/IP (UDP) initialized.
