Netop Guest connecting to Netop Host running on Linux via NSS - "NSS service not available"

Article Number: 444 | Last Updated: Tue, Jan 31, 2017 1:17 PM

When connecting from the Netop Guest to the Netop Host running on Linux via the Netop Security Server, the follow message is displayed: â€œNSS service not availableâ€•. **Workaround:** On the Netop Host running on Linux, open Netop Host Manager (from **Tools > Options**, enter the account for changing the Host configuration and click **OK**). G **Local Configuration > Host Computer > Addresslists** branch and add the Netop Security Server IP. Go to **Local Configuration > Host Computer > Communication branch > UDP** and create a new entry in the broadcastlist add addresslist that contains the NSS IP. **NOTE**: To ensure that changes have been applied, restart Netop Host after the changes.
