Silent Deployment on macOS

Article Number: 454 | Last Updated: Mon, Mar 20, 2017 2:41 PM

You can deploy Vision for Mac (including the license) from Terminal, by taking the following steps: Open
Terminal. Run the following command in bash: sudo bashÂ -p -l where is the location of the
license_install.sh file, is the location of the .pkg file, and is the license number, in the
VIXX-XXXX-XXXXXXXXXXXXXXXX-XXXXX format. The following is a command example, if both the
VisionTeacher_9.6.pkg and license_install.sh files are on Desktop: sudo bash ~/Desktop/license_install.sh -p
~/Desktop/VisionTeacher_9.6.pkg -l VI90-ABCD-9FFD9MJKEA19U9BUY-S9WD9
