

## **Vision7 doesn't import Vision6 classrooms**

Article Number: 48 | Last Updated: Wed, Mar 11, 2015 7:38 PM

Applies to: Vision7 all versions, Vision Pro 7.3 or higher

The location in the registry where the classroom information is stored has changed between Vision6 and Vision7. You can modify the existing exports to work with Vision7 by opening the mecrd file in Notepad and then replacing all references of MasterEyeXL with NetopVision using the find and replace functionality in Notepad. After doing this you should be able to import the classes normally.
